

Task 2: SQL for Data Extraction

Objective: Learn SQL queries for extracting and analyzing data using SQLite.

Tools Used: Python, Jupyter Notebook, SQLite, DB Browser for SQLite, Pandas.

Dataset: Sample Superstore.

Work Completed:

- Created SQLite database (sales.db)
- Imported Sample Superstore dataset
- Executed 15 SQL queries
- Connected Python with SQLite

SQL Concepts Covered:

SELECT, WHERE, ORDER BY, LIMIT, SUM, AVG, COUNT, MAX, MIN, GROUP BY, HAVING, Subquery.

Files Included:

SQL_task2.ipynb, sales.db, SampleSuperstore.csv, sql_connection.py

Conclusion:

Successfully completed Task 2 by performing SQL data extraction and basic analysis using SQLite and Python.
